Powerful and Efficient Exchange Recovery & eDiscovery

Enabling Exchange administrators to quickly find and recover items from Smart Copies

Restoring mailboxes, folders, and individual message items from Exchange backups to a live Exchange server is a time-consuming and expensive service IT administrators must provide to their end-users.

With Dell's new EqualLogic Auto-Snapshot Manager creating EqualLogic Smart Copies of Microsoft Exchange data is simple, fast, and reliable.

The PS Series Auto-Snapshot Manager, with its sophisticated scheduling capabilities, greatly increases the ability of IT staff to respond to Recovery or eDiscovery requests by making a large number of Smart Copy snapshots immediately available.

While direct access to snapshot, clones and replicas substantially shortens the recovery cycle at the database level, the reality is that the majority of discovery and recovery tasks are focused at the mailbox, folder, and item level.

Lucid8's DigiScope for Microsoft Exchange fills this gap by providing IT administrators the ability to execute Recovery and eDiscovery capabilities directly from Smart Copies. Its seamless integration with EqualLogic Auto-Snapshot Manager enables IT administrators to:

- Quickly locate all Exchange Servers with Auto-Snapshot Manager Smart Copies stored on Dell EqualLogic Storage PS Series storage arrays.
- Mount multiple Smart Copies simultaneously to access the native Exchange databases (EDB's) and log files.
- Search across all mounted Smart Copy databases for mailboxes, folders, and items to be recovered or exported.
- Restore mailboxes, folders, and individual items to the live Exchange server directly from Smart Copies.
- Export mailboxes, folders, and individual items to PST and various other formats to respond to eDiscovery requests.

End-User Outlook Based Self-Service with Recovery Advantage™

Enabling end-users to quickly find and restore their missing/deleted items from Smart Copies

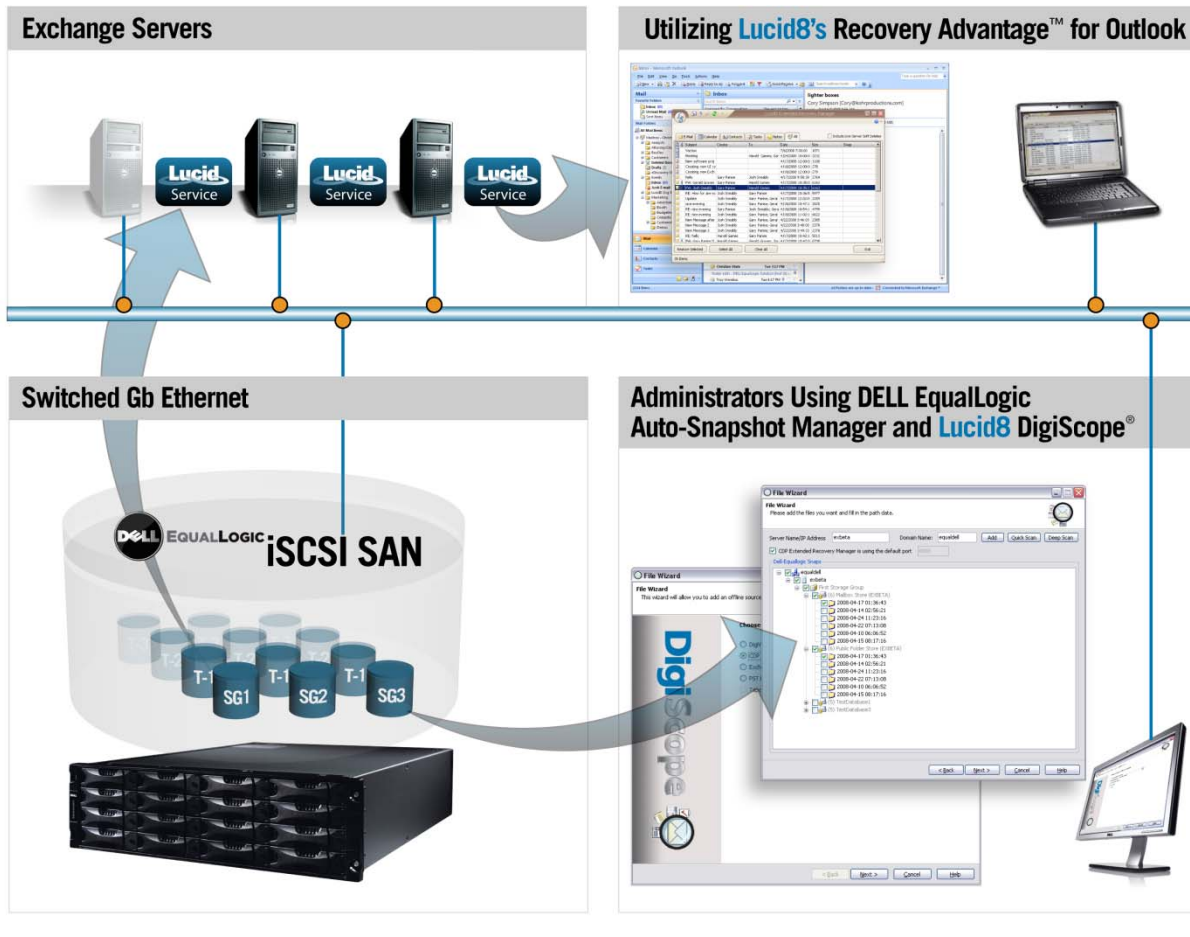

IT departments that provide mailbox, folder, and individual item recovery services for end-users should consider empowering their end-users with self-service recovery capabilities. Doing so not only frees up IT resources for more important tasks, it also decreases recovery times and the Administrators workload while increasing user satisfaction and productivity.

Lucid8's Recovery Advantage Add-on for Outlook enables end-users to recover their own items beyond the retention timeframe provided by Microsoft Exchange by allowing them to:

- Search for, preview, and print items which are stored within the Auto-Snapshot Manager Smart Copies and are no longer present on the live server, as well as items that have been soft or hard deleted on the live-production Exchange server.
- Restore individual items including attachments to the live Exchange server directly from any Auto-Snapshot Manager Smart Copy or undelete hard and soft deleted items from the Exchange Server.

For the end-user, the process is simple, secure, and efficient since it is integrated into Outlook and completely shields the user from multi-step, cumbersome, and confusing processes as well as the underlying storage system.

Lucid8[®] DigiScope[®] & Recovery Advantage[™]

Dell EqualLogic - Protects Exchange in Case of Failure

Email is mission-critical and the underlying storage platform is a key component in protecting your Exchange environment against failure.

Dell EqualLogic PS Series storage arrays provide a highly scalable, reliable, and easy-to-manage SAN and data protection solution that enables organizations to streamline their backup and recovery processes without impacting Exchange server performance. Additionally, EqualLogic Smart Copies are invaluable for conducting test, development, maintenance, and eDiscovery tasks *without* impacting the live Exchange environment.

The Dell EqualLogic and Lucid8 Solution

Better together – scalable high-performance SAN for Exchange with the best Recovery and eDiscovery solutions for Exchange

Combining both solutions enables IT departments to:

- Protect their Exchange environment against failure.
- Rapidly recover entire Exchange databases in case of a server failure.
- Provide mailbox and item-level recovery without interrupting the live Exchange environment.
- Enable Outlook based Self-Service Recovery of Missing / Deleted Exchange Items.
- Respond quickly and cost effectively to eDiscovery requests without impacting the live server.

Lucid8 - Reduce Cost for Recovery and eDiscovery

Lucid8's DigiScope provides a powerful and easy to use tool enabling IT departments to quickly find and restore data to the live-production Exchange environment or to export results into multiple formats for Data migration, eDiscovery, and other projects.

Lucid8's Recovery Advantage for Outlook allows end-users to quickly find, review, print and recover missing / deleted Exchange items. This self-service application decreases recovery times while increasing end-user productivity and freeing up IT resources for more important tasks.
